# Computer Network Homework #3

ID: B07902070 Name: 陳昱妤

### How to execute codes

## Compile

• sender: make sender

• receiver: make receiver

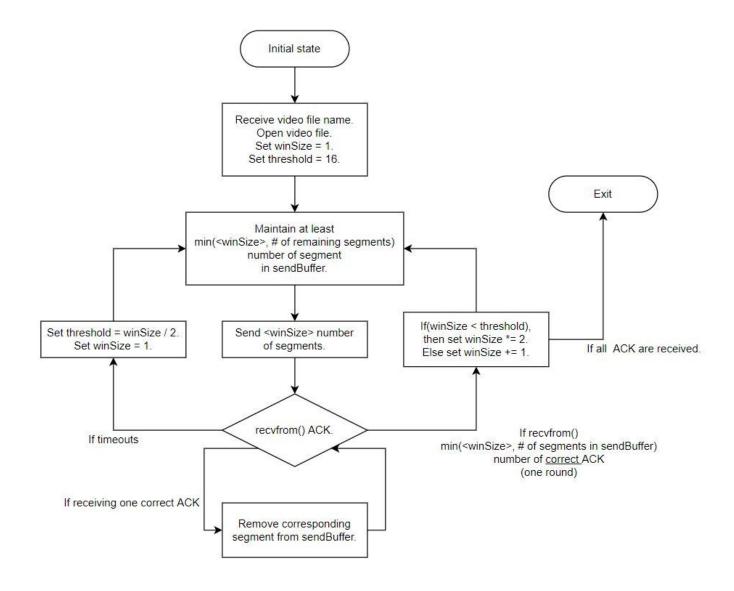

• agent: make agent

#### Execute

- sender: ./sender <sender port> <agent IP> <agent port>
- receiver: ./receiver <recv port> <agent IP> <agent port>
- agent: ./agent <sender IP> <recv IP> <sender port> <agent port> <recv port> <loss rate>
- Or use exec.sh shell script:
  - sender: ./exec.sh sender
    (./sender 7001 local 7002)
  - receiver: ./exec.sh receiver
     (./receiver 7003 local 7002)
  - agent: ./exec.sh agent <loss rate>
     (./agent local local 7001 7002 7003 <loss rate>)
- 先依任意順序執行 sender \ receiver \ agent , 然後將影片放入 sender\_dir 中。接下來在 receiver 內輸入 play <video name>。 未做確認影片的檢測,因此請特別注意。
- 沒有實做 ffmpeg。

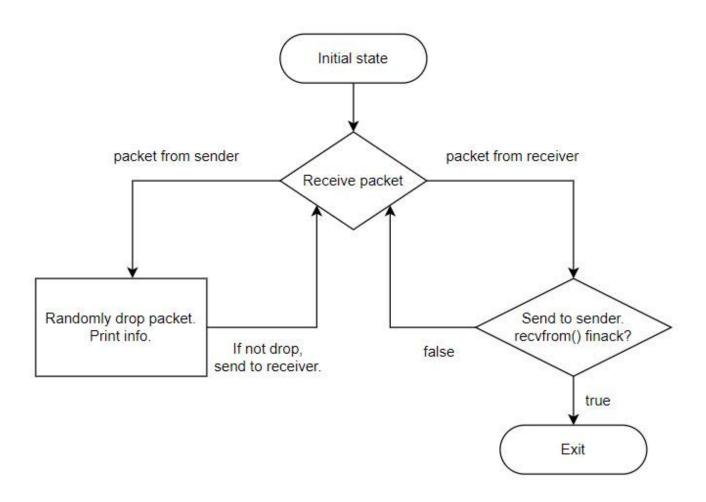

# Program structure

#### sender

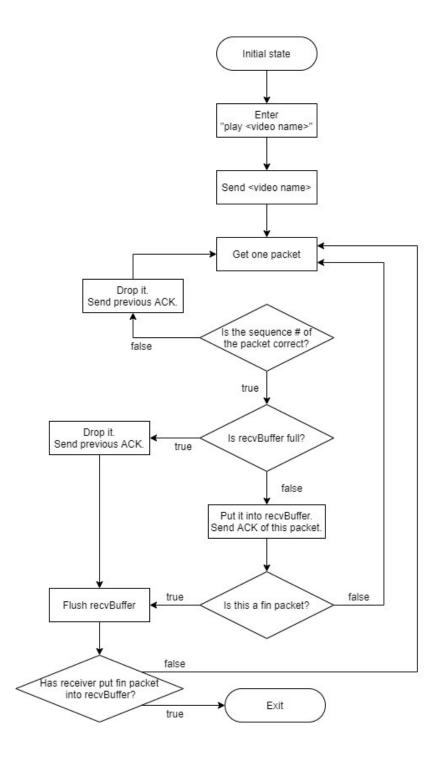

- 以 select 當做 timeout 的測試依據。
- 以 linked list 實做 sendBuffer 。

### agent

### receiver

- 以 linked list 實做 recvBuffer 。
- 會先準備一個 frame size 大小的 frame buffer ,用來接收 flush 下來的資料。 如果 flush 到滿足一個 frame ,才會將 frame buffer 的東西複製到 imgClient.data 並播放畫面。
